Enjoy being focused

Open offices were revolutionary – they broke down the barriers between co-workers that cubicles had created. The change gave way to collaboration, communication, and involvement. About 70% of all offices are currently open plan.

But it has its downsides also. **95% of people say they struggle to focus at work.** The most disruptive office distractions are caused by our beloved colleagues – their talking loudly on the phone and chatting nearby. Interrupted work results in 2.1 hours a day lost to office distraction and it takes about 25 minutes to return to the task after a distraction.

The office concept is being redesigned once again. This time the goal is to find **a balance between shared and private space.** To find solutions that provide flexibility and support different ways of working.

As a constantly growing company, we know firsthand what it is like to work in an open-plan office. This is why we dedicate ourselves to providing solutions that make open offices work better.

In a world where you are constantly disrupted at work, Softrend provides **the space where to focus on the most important task at hand.** Our furniture is for people who want to get things done.

Multifunctional solutions that can be easily added to improve existing open offices

- Different tasks require different working environments. Our solutions are modular, multifunctional and easy to add to existing open-plan offices.
- For making everyone feel comfortable and productive in open-plan offices, it is wise to plan zones for taking a break and chatting with colleagues; more secluded sofas with high walls for individual work; creative corners for meetings and brainstorming sessions; small boxes for phone calls and private conversations.

CREATIVE & BRAINSTORMING AREAS – Get ideas flowing in a more relaxed type of meeting room with movable table and high rocking-poufs as chairs.

LOUNGE AREAS – Take a moment to chat with colleagues or read a book before diving back into work with a rested mind.

WORK PRIVATELY – Focus purely on the task in hand thanks to sound-absorbing walls or make phone calls without disturbing others.

MEET PRIVATELY – Make one-to-one meetings more productive with separated sofas with high sound-absorbing walls.

Softrend is an upholstered furniture manufacturer established in 1997

- Thanks to over 20 years of experience in manufacturing soft furniture, we know how important is good design, comfort, and durability. Our made-to-order public space collection meets the same standards.
- All our products are made by hand in Europe, in our own factory in Estonia. We manage the process from idea to final product, to be sure that everything meets our sustainability and quality standards. We appreciate the benefits of a small company that provide us with flexibility, a personal approach and the ability to react quickly
- We are a family company. Making decisions in the family means considering the long term. This is why our decisions are based on the idea of sustainable development, according to which you need to consider the environment and other people's needs in business and production.
- Great things happen through collaboration. We work together with different designers to offer innovative products to contemporary offices and public spaces.

Made to last. Sustainably.

We are making a conscious effort to be able to proudly call ourselves a waste-free company

- We believe all materials should be used sustainably – our product range includes Green label collection – sofas, pillows, and poufs made of leftover materials as well as an upcycling product range created in cooperation with renowned designer Reet Aus.
- Our contract fabric collection includes cover materials that are made from recycled plastic bottles.
- We organised a drawing competition for children to design soft toy animals together with MiaPuPe. These toys are made by seamsters with hearing impairments using leftover materials from Softrend's factory. Part of the profits from each toy is donated to students with hearing impairments.
- Everything we make and deliver to our private customers is packaged using recyclable material.
- Softrend is making an effort to become a waste-free company and is looking for new ways and new technologies to use all sorts of excess material without creating more waste. For example, we use a special cutting machine to minimise waste when cutting fabric.

Our quality standard

FUNCTIONALITY

Durable, high-quality materials: 5-year guarantee on solid wood frames

High-quality fabrics: a carefully selected collection

Comprehensive and continuous product development: every product has its own story

The right sofa for you: we prepare it according to your exact requirements so that you will be satisfied with your sofa for a long time

DESIGN

Wide selection: different models, dimensions and upholstery options

More than just a sofa: many compatible products

Softrend's style: timelessness and calm in a Nordic way

A sofa that looks good should also be comfortable: we collaborate with leading designers

SERVICE

20 years of experience: we understand you and can recommend furniture that is perfect for your lifestyle and needs

Follow-up service: our team will be happy to take care of Softrend products, even if they are already yours

Design-conscious consultants: all our employees are fans of Softrend's products

What should you consider when selecting sound-absorbing furniture?

When walls vanish and an office opens up, you develop a need for places that can be described as rooms within rooms. Such places can be created using removable screens and furniture that absorbs sound, thereby allowing you to have a more private conversation or a place to contemplate things in peace. Our acoustic environment plays a major role in our lives. It affects our working efficiency and ultimately also our health.

Sound perception

Public space and open offices often have problems with resonance, meaning that sounds reverberate for too long. Creating a more pleasant environment requires us to dampen all kinds of different sounds, such as fans, people's footsteps, conversations and phone calls.

People's perception of sound depends on a variety of factors, including level and frequency, but also the type of the sound: whether it is constant or fragmented, noise or music.

The ear is highly sensitive and sound waves don't have to be particularly strong to be heard. People hear sounds from 0 dB to 120 dB (the pain threshold) at the frequency range of 20-20000 Hz. Sounds that are at a lower frequency than the limit of human hearing are called infrasound, while sounds exceeding that limit are called ultrasound. For voice and speech recognition, the most important frequency range is 300-3000 Hz.

People perceive sound differently. Something barely audible to one person may disturb another. Even one person can perceive the same sound differently depending on the situation. A 10 dB increase in the level of sound is considered to double the loudness of the sound. A change of 1-2 dB is considered to be the smallest alteration that humans can perceive.

Acoustic absorption

Sound waves cannot move freely in a closed room and bounce off the structure of the room. Some of the sound is absorbed by surfaces, while some reflects from them. Monitoring sound absorption and achieving the recommended reverberation duration is one of the principal tasks in the acoustic design of rooms.

Acoustic absorption means that sound does not reflect off a material after reaching it. That is also the principle of designing furniture with acoustic properties: furniture has to absorb the sound that would otherwise reflect back and contribute to unwelcome noise. Materials with good sound absorption are porous and breathable. Synthetic felt and a range of foams are among the materials with such properties, which we also use in Softrend products. The models in the August and Sigmund ranges also use felt fabrics for upholstery to ensure better sound absorption. The calculated sound absorption for the models in the August range is between 0.2-5.1 sabins*, depending on the sound absorption coefficient of the particular material.

Materials with good sound absorption are porous and breathable.

Synthetic felt and a range of foams are among the materials with such properties, which we also use in Softrend products.

The decibel is used in acoustics to express the level of sound pressure (symbol L) relative to 0 dB. The agreed sound pressure for this 0-level is 20 micropascals (µPa), which corresponds to the threshold of human hearing.

Sound pressure or acoustic pressure is a change in the ambient atmospheric pressure in the form of a wave. As it moves through the air, sound creates areas of high and low airtightness. As sound moves through the air its pressure also alters somewhat. Small changes in air pressure caused by sound moving through the air are referred to as sound pressure. The unit used to describe acoustic pressure is the pascal (Pa). The human ear reacts to sound pressure, which is what causes us to hear sounds.

The threshold of hearing is the minimum sound level or pressure that human beings can perceive as audible sound. The threshold of hearing at 1000 Hz is deemed to be equal to 10-12 W/m² (2·10⁻⁵ Pa). This sound pressure value is used as a base or comparison level (0 dB) on a scale of the relative sound pressure level (usually a logarithmic scale in decibels) when describing findings in hearing studies.

The acoustic absorption of materials is characterised by the **acoustic absorption coefficient**, which does not have a unit and can vary from 0 (fully reflective) to 1 (fully absorbent). The acoustic absorption of furniture can be described by its equivalent absorption area, which is equal to the absorption coefficient multiplied by the surface area of the material (m²sabin). This size is used when calculating the reverberation duration of a space.

Recommendations for pleasant working environments

Office space

To achieve a good acoustic environment in offices, we recommend that the space be designed to ensure a reverberation duration of around 0.6 seconds at 250-4000 Hz. It is important to consider the number of employees, the noise created by office equipment and the need to have private conversations and phone calls. Sound-absorbent surfaces should be in close proximity to office equipment. The more people there are in the space, the greater the need for surfaces with acoustic absorption properties.

Suitable products: Sigmund, August, August Wall, Frankie

Meeting rooms

Solutions for meeting rooms should take into account the size of the rooms. For smaller meeting rooms, the reverberation duration at 250-4000 Hz should be 0.6 seconds, but it is better to aim for 0.8 seconds in more spacious rooms. Voices should be clear and understandable in all parts of the room, meaning that surfaces with semi-reflective properties can help achieve a good acoustic environment in larger rooms.

Suitable products: August Wall or Sigmund sound-absorbing panels

Open-plan offices

The optimal reverberation duration that you should aim for when designing the space should be 0.5 seconds at 250-4000 Hz. It is advisable to use sound-absorbing screens to separate workplaces and avoid noise-reflective surfaces.

Suitable products: Sigmund, August, August Wall, Frankie

Other public space

Similar principles to those of open-plan offices apply in restaurants, hospitals, museums, hotel lounges, shopping centres and other public areas. Such places are bustling with people, and there are all kinds of sounds coming in at different frequencies, which often leads to a lot of reverberation.

Sound-absorbing furniture and panels should be positioned as close as possible to the sound source and should also be present in places where the sound energy is initially reflected back by desks and paths of movement. Soft surfaces close to the workplace absorb most of the sound, significantly improving the acoustic environment.

For voice and speech recognition, the most important frequency range is 300-3000 Hz.

August

Sound-absorbing sofa

This product has been created for:

- > Concentration and seclusion
- > Private meetings
- > Dividing space into different zones
- > Improving the acoustic properties of the room

Design: Pent Talvet
Iseasi

The August series of sofas with sound-absorbing qualities was created especially for open-plan working environments. The sofas come in a range of widths and heights, allowing you to create free-standing islands of privacy of different shapes and sizes where you can hold mini-meetings, delve into paperwork or make important phone calls away from busier working areas. In terms of style, the August is chic in a slightly reserved way and very composed. The asymmetrical backrest pillows, which resemble sea stones, provide a friendly accent. The functional nature of the August has been packaged in a compact, modest form that's designed to fit in with any interior. High-quality materials and skilled craftsmanship ensure that you can rely on the August to live up to the needs of your office for a long time.

August Workbay

Sound-absorbing sofa

The August sofa set provides an easy solution for creating a workbay where you can go to get some privacy or have meetings. The only thing it takes is to connect two roofed Augusts with a partition wall. August's bent roof and high-rise sides add some excitement to the interior as well as providing a large, sound-absorbing surface. This is what makes the August Workbay perfect for holding meetings and having private conversations.

August Wall

Sound-absorbing sofa

Soft wall panels with a separate pouf add a playful touch to the August range. Sound-absorbing panels help improve the acoustic properties of open rooms. There is an air gap between the panel and the wall which functions just like a sound-absorbent material in dampening low-frequency sounds. Panels need to be fixed to the wall.

August Nook is a compact workplace for those mobile employees who land in the office to focus on episodic tasks but who doesn't require a permanent desk of their own. It offers more privacy than traditional work-bench-type solutions commonly used for such occasions.

Nook is a 3-in-1 solution including a screen above eye-level to increase privacy and reduce acoustics, a desk measured for laptop work and a seat comfortable enough to stay for the whole day.

Designed for open-plan offices, the Nooks can be installed as separate islets or as rows.

Seat depth: 48 cm
Seat height: 45 cm

Creative Corners

Innovative environments for working together

Design: Martin Pärn & Janno Nõu, Iseasi

Creative Corners brings co-creation space into the office. There's a time and a place for every kind of work. Including creating and working in teams. We need dynamic and flexible space where furniture doesn't hamper us, but instead empowers our collective creativity – without us even being aware of it – to think up something new, to develop and test our ideas, to play with our plans. Innovative environments that support working together ask for different type of settings and furniture than we're used to seeing in an office. The Creative Corners range brings new ideas and new kinds of behaviour into your office, and gets them working for you.

The best way of getting a team to push new ideas forward is to keep them, quite literally, on their toes. With everyone standing, all ideas and thoughts are equal, spontaneous and welcome. And if we use walls, we create an active and information-rich space that supports the generation of ideas and the development of projects. Furniture should support such active use of space.

You can work at the table on your feet or by resting your weight on one of our **Hubert** poufs. Chairs with raised seating keep your back straight and your mind sharp. They set you no barriers. Jumping up to throw yourself into the discussion is quick and easy. You can sit on them facing any direction you like. A rocking version will bring versatility to your everyday work and add a sense of dynamism to the space you're in.

This product has been created for:

- > For active co-creation
- > For brainstorming
- > For teamwork

Sound-absorbing screen

-  5 YEAR GUARANTEE
-  FIRE RESISTANT FABRICS
-  FIRE RESISTANT FOAM
-  GOOD SOUND-ABSORBING QUALITIES
-  FSC CERTIFIED WOOD ONLY

This product has been created for:

- > Dividing space into different zones
- > Dampening noise
- > Creating separated corners
- > Use as an information board

Design: Pent Talvet
Iseasi

A modern office is a flowing environment that shifts and changes along with its workers and the work they do. This sound-absorbing screen enables you to easily create zones in an office. **Using more than one module, you can establish a noise-dampening wall** or a little corner for people to sit together in. This type of a screen is irreplaceable in spaces where the nature of the work you're doing demands more privacy than a fully open room allows.

Lilja

Modular sofa

Design: Samuli Naamanka

The Lilja was designed in cooperation with Finnish designer Samuli Naamanka. Its harmony and timelessness make it a true pearl for public space. Warm and friendly solid wood and elegant lines make up a pleasing piece of furniture that reflects the Nordic attitude to style and quality. One of the most important qualities of the Lilja is that it is modular. You can play around and create versatile combinations for rooms with different functions, as well as making the sofa even more personal by selecting the colours and armrests your prefer. The warmth and ergonomic design of this sofa plead with you to take a seat. It is truly comfortable.

This product has been created for:

- > Public areas
- > Waiting areas
- > Lounges
- > Open-plan office islands

Meeter

Sofa

This product has been created for:

- > Cafés and restaurants
- > Waiting areas
- > Tight conditions
- > Private conversations

Design: Argo Tamm

Meeter is a **modular sofa for all kinds of public space**: restaurants, waiting areas, offices and more. It can be put together from modules of three different heights whose width is your choice: anywhere between 62-150 cm. Adding a touch of character is the sofa's slender metal legs. Meeter solutions are ideal for team and individual work. They can be formed into combinations for group work or used to divide up your space into separate units. The filling and covering materials are durable and fireproof, as public space demands.

Meeter sofa complies with the standard EN 16139:2013 furniture strength, durability and safety requirements for non-domestic seating level on test severity L2 requirements. This makes Meeter suitable for extreme use: E.g. in night-clubs, police stations, transport terminals, sport changing rooms, prisons, barracks and other non-controlled areas.

Museo

Modular sofa

This product has been created for:

- > Cafés and restaurants
- > Public areas
- > Waiting areas
- > Open-plan office islands

Design: Argo Tamm

The keywords with this sofa are comfort, flexibility and mobility. It comprises modules from which you can create a variety of combinations. Museo is universal and classic in form, making it perfect for waiting areas in just about any public space. Adding a touch of lightness and character are its metal legs, which come in a range of finishes. The filling and covering materials are durable and fireproof, as public space demands.

Product information

Plug-in option

Frame

Solid wood and plywood

Upholstery

Seats and backrest have durable and fireproof HR foam; seat cushions and backrest pillows are fixed

Legs

Powder-coated metal: black matte RAL 9005; anti-slip soles

Modularity

Modules can be connected together

Additional Information

Tables

All dimensions provided in centimetres.

Seat depth: 48 cm

Example combinations

Sans

A soft work sofa

Design: Argo Tamm

Designed as a sofa for use in public spaces, Sans is more than just comfortable – it's so cozy you'll probably never want to get up again! The soft upholstery is offset by a slender metallic base. It's the perfect place to get some work done or gather your thoughts uninterrupted, while the power sockets and USB port keep you connected to the rest of the world. A range of back pillows, modules and tables enables you to turn Sans into exactly the piece of furniture you need for your work and activities – whether that be a private corner with high walls, a little island in the middle of an open space or one of numerous other options.

This product has been created for:

- > Public areas
- > Private meetings
- > Dividing space into different zones
- > Resting or relaxation

Product information

Plug-in option

Frame

Solid wood and plywood

Seat & backrest

Durable and fireproof HR-foam; seat frame with springs

Additional pillows

Feather filling; two sizes available

Legs

Powder-coated metal, colour option: black; plastic soles

Sofi

Sofa & pouf system

This product has been created for:

- > Small offices
- > Waiting areas
- > Use in larger offices (several at a time)

Design: Janno Nõu
Iseasi

The Sofi series was designed to make people in offices feel more at home. In terms of style it's more fun than your average office furniture, and more slimline and approachable, too. The use of legs (rather than a base) produces a lightness that's both literal and figurative, and invites people to rearrange the poufs around the room to suit themselves. The Sofi series is well-suited to smaller offices, as well as to larger office spaces in greater numbers.

Product information

Frame

Solid wood and plywood

Seat & backrest

Durable and fireproof HR-foam

Legs

Solid wood oak

Additional information

The cover fabric is not removable; recommended cover fabric: felt

Dimensions

Seat depth: 48 cm

All dimensions provided in centimetres.

Intro

Intro to a stylish living room

This product has been created for:

- > Waiting areas
- > Informal meetings
- > Tight conditions

Design: Argo Tamm

In developing this armchair, designer Argo Tamm knew what he wanted the end result to be: compact, minimalist and of course comfortable, in line with the quality for which Softrend is renowned. With all the elegance of a sculpture, Intro is beautiful from every angle – but more than that, it is also inviting, as if calling to you to sit down and relax. Its form, though slender and curved, offers full support and will wrap you in its embrace.

Guaranteeing the durability of the armchair is its strong metal frame, cushioned with high resiliency moulded PU foam. Its solid timber revolving foot is offset with a contrasting metal line – a small but highly effective detail in an armchair that is already unique in form. There is a variety of fabrics to choose from, allowing you to design Intro to perfectly suit your home.

Product information

Materials

Frame: metal
Upholstery: high resiliency moulded PU foam
Cover material: range of fabrics available

Legs

Painted metal & solid timber; colour options:
white / oak, natural
grey / oak, natural

Cover materials

Valchromat® colour options for additional table

Applicable: August, Frankie, Meeter

Valchromat® is an innovative wooden board that combines the natural properties of wood with bright colours. Because Valchromat is about 30% more dense than usual MDF boards and is coloured throughout, it is also more resistant to mechanical damage.

In the Valchromat production process, painted wood particles are glued together with a special low-formaldehyde resin with good lubricity. Small wood particles create a delicate sparkling pattern on the board, so differences in colour and pattern may sometimes occur.

Standard Colors

Light grey Grey Black

- Custom color at customer's request from Valchromat colour catalogue
- Additional optional cost will be added
- Custom colour is not stock material, extra delivery time 2-3 weeks

Non Toxic

Ecological organic dyes.
Formaldehyde emissions are within the limits set by European standards.

Standard colour options for metal frame

Applicable: August, Frankie, Meeter, Penta, Museo, Sans

White Formica Infiniti™ F949 White Gray Abet Polaris 2907 Gris Foncé Pol Black Abet Polaris 2902 Noir Pol Bio-Oak F7603

Custom colour is not stock material, it is necessary to specify the minimum quantity, extra delivery time 2-3 weeks

Formica Infiniti™ – Matte, fingerprint-resistant, high-pressure laminate.

As beautiful as it is durable, Formica Infiniti® Laminate features a soft-to-the-touch super matte finish, resists fingerprints, has thermal healing capabilities and built-in antimicrobial surface protection.

Abet Polaris is smooth and velvety to the touch, and its surface features are truly extraordinary: it is highly resistant to scratches and heat, as well as being anti-fingerprint. The curious combination of durability and velvet smoothness gives Polaris a futuristic appeal, making it the ideal choice for ultra contemporary projects, delighting the senses with a pleasant and unique effect.

Fabric collection

Our standard selection includes contract fabrics from different suppliers:

- Camira
- Kvadrat
- Gabriel
- Nevotex
- Agua

Sustainable fabrics

Caring about the world around us we make long-lasting furniture and use fabric leftovers on specially designed products. To minimize our impact on nature even further we have also included several environmental-friendly and recycled fabrics to our standard selection.

Camira's Rivet is designed to blend the aesthetic qualities of luxury woolen apparel with modern performance sportswear, Rivet is a lightly textured hopsack which emulates the swathe of suiting in a well-heelled synthetic. Rivet is made from 100% REPREVE®, a brand of recycled polyester made from used plastic bottles.

Gabriel's Cura is a multi-purpose, two-coloured upholstery fabric made from 98% post-consumer recycled polyester. It fuses modern performance with a warm, casual aesthetics and a soft, voluminous touch.

Blue Company's Dama is an eco-friendly fabric made of recycled wool, suitable for multipurpose use. Wool has very good acoustic qualities - it increases sound-absorbing and that makes it especially good choice to use on our products in open-plan offices.

Easy-clean fabrics

Aquaclean® technology is a revolutionary fabric treatment that allows you to clean stains using water only. This provides you with simple fabric maintenance in the minimum amount of time.

Aquaclean helps to remove the majority of household stains (wine, ink, sauce, fat, mud, chocolate, cream, etc.) making life easier and giving you more time for the more important things.

Good to know

We produce all our furniture in our own factory and therefore can customise the products upon your request.

All polyurethane foams used in our products meet the requirements of ignition class SL-1 (difficult to ignite).

All colors and polishes meet ISO standards.

We only use FSC certified wood.

PE FURNITEST has carried out an assessment on August, Frankie, Meeter, Hexa, Penta, Sans sofa collection in accordance with standard EN 16139:2013 including correction EN 16139:2013/AC:2013 level of test severity L1 requirements.

Meeter sofa complies with the standard EN 16139:2013 furniture strength, durability and safety requirements for non-domestic seating level on test severity L2 requirements. This makes Meeter suitable for extreme use: E.g. in night-clubs, police stations, transport terminals, sport changing rooms, prisons, barracks and other non-controlled areas.
